This an extensive report for Project 5 – Portal

This project sums up our collective knowledge on HTML, CSS, JavaScript, and Bootstrap. I will be using a Bootstrap template which is a requirement for this project. The inspiration and template of this work is by a web designer named Mehmet Zinnur Öcal. The link to his template (https://www.behance.net/gallery/63901069/Barts-Free-Simple-Minimal-Portfolio-Website-Light?tracking_source=search_projects_recommended%7Cfree+bootstrap+)

I have chosen this template as I adore minimalism when it comes to a website. The many changes I made first were the photos of the different projects that we did for the class and a brief description of the requirements that were given on Canvas. I struggled a bit with changing some animations that were hard and found that I can just change the values of these animations. I also changed the favicon for the portal and managed to change it to my initials (CV) to look more professional.

If there were some additional things I would like to add here in the future, it would probably be adding an avatar where it follows your cursor on the website. Since my limited knowledge does not know on how to do this with pure JavaScript and CSS, I will garner my time after finishing this project to improve on coding additional elements to the portal. I can probably use this template as my own website; however, I will still need to add a lot more stuff to my projects and to change the theme of website itself.
